ORAD SITUATION MANAGEMENT SYSTEM (OSM)

In emergency situations, there is no room for mistakes. Procedures must be followed and the entire team, including your on-call responding employees, must react infallibly and be perfectly synchronized. It is for these crucial moments that we at Orad Group created the Orad Situation management App (OSM) powered by Bravo.ai.

The OSM platform revolutionizes the handling of both mega events, as well as small scale ones. Using carefully constructed protocols, OSM semi-automatically streamlines procedures, and micro-manages all security teams, while avoiding information overload. OSM connects multiple sensors to a desktop command center, that integrates both human communication and adaptive Standard Operating Procedures (SOP's).

OSM contains carefully constructed template libraries that adapt to exact situations (such as injury, fire, violence on the premises, etc.). In any situation, team members fully understand their tasks and are in constant collaboration. Orad's comprehensive framework that connects sensors, people and protocol delivers the highest standard in management and safety, allowing the most critical information to be recorded, assessed and delegated to the right person with clarity.

Our user-friendly frameworks User Experience & User Interface (UX/UI) provides immediate connection to your team, allowing them to report an incident and trigger semi-automatic coordinated responses and provides them with step-by-step response guidance. By ensuring strict adherence to the procedures, including in stressful situations or in instances when an employee is untrained, OSM alerts its operators when anomalies are recognized and when man-made decisions are required. Thus, improves security team performance, increases service level, and reduces the risk of catastrophe, all with major savings on the cost of training.

OSM alerts its operators when anomalies are recognized and when man-made decisions are required. Thus, improves security team performance, increases service level, and reduces the risk of catastrophe.

At its core, OSM celebrates the thoroughness of micro-management without overloading users or managers with excess information. While tracking significant details, large groups of employees with multiple and differing responsibilities stay motivated and on track.

ORAD

OSM supports human interaction and real-time team cooperation, as required to complete daily routine tasks and emergency response challenges.

Key Features:

▶ Simplifies mission control

▶ Automatic response guidance

▶ Artificial intelligence driven system

▶ Provides team members with step-by-step response guidance, whilst improving performance.

▶ Integrates both human communication and adaptive Standard Operating Procedures (SOP's).

▶ Reduces costs and improves business productivity.

About Orad

Orad is a leading provider of integration services delivering proven end-to-end security, safety & HLS solutions. The company is highly experienced in implementing a wide range of projects such as border protection systems, military bases, defense agencies, safe cities, airports, seaports, railway terminals, correctional facilities, public buildings and more. In addition, Orad Group offers safety & fire detection, electromechanical systems, automation, control and solar energy (PV) in Israel and abroad.
